BITOK · OCTOBER 2026

What crypto firms pay per AML check in 2026

Public list prices and published contract ranges for wallet and transaction screening, in one table. Built for exchanges, payment firms, wallets and iGaming operators comparing or renegotiating a KYT line.

$0.07 – $0.50
per check, vendors with a public price list (volume tiered)

$40K – $150K
per year, typical enterprise contract for a mid-size VASP (third-party estimates, no public list)

~10×
spread in effective price per check between a small and a large buyer at the same vendor

1. Vendors with a public price

Vendor	Model	Entry price / check	At volume / check	Notes
BitOK	Prepaid API packs, no subscription	$0.50 (2K)	$0.16 (200K)	Dashboard from $500/mo or $5,000/yr. Address + transaction scoring, graph, PDF reports.
AMLBot	Credit bundles	$0.45 (20)	quote (Pro / enterprise)	Lite tier published; larger tiers via sales.
CoinKYT	Tiered API + bot	$0.25 (bot)	$0.07 (API, high volume)	Lowest published floor in the sample.
MistTrack	API call packs	$0.10 (10K pack)	—	Dashboard billed separately.
Didit	Flat per check	$0.15	$0.15	Or bring your own screening provider; a second page lists $0.02–$2.00 for the AML module.

Prices as published on vendor sites and vendor blogs in October 2026. Tier labels in brackets show the pack size the price applies to.

2. Vendors without a public price

Vendor	Pricing	Published estimates, per year	Source type
Chainalysis (KYT)	Annual contract, quote only	$25K – $300K+; mid-size VASP €120K–250K	Aggregators, buyer-reported
TRM Labs	Annual contract, quote only	$33K – $500K+; median ≈ $112K from verified purchases; first-year median ≈ $40K	Aggregators, Vendr-style data
Elliptic	Annual contract, quote only	$40K – $100K+; mid-size VASP €80K–180K	Aggregators
Crystal Intelligence	Quote only	not published	—
Scorechain	Quote only	not published	—

These ranges are secondhand and inconsistent across sources. They are useful as a budgeting envelope, not as a quote.

What the numbers mean for a buyer

- A $60K/yr contract used for 100K checks costs $0.60 per check. The same contract at 20K checks costs $3.00 per check. Most "expensive" KYT is a volume forecast that did not come true.
- Published per-check pricing clusters at $0.07–$0.50. Anything above $0.50 effective is worth renegotiating or splitting across two providers.
- Second-opinion setups (a cheaper provider on disputed addresses only) typically run at 5–15% of the primary contract and cut analyst time on hard cases.

---

3. How to compute your own line

Input	Where to find it
Annual contract value, all fees	Invoice, including onboarding and support
Checks actually run in the last 12 months	Vendor dashboard export or API logs
Effective price per check	Contract value ÷ checks run
Share of checks that were re-screens or disputed	Case management system

If you send us these four numbers, we return a one-page comparison against the ranges above. No pitch attached.
